Swanton, OH – DeVilbiss Automotive Refinishing announces the new TEKNA QuickClean, the latest in high performance spray guns. The spray gun features the innovative QuickClean coating. Developed for military, aerospace, and surgical applications, the coating provides fast clean up, superior durability, and high corrosion resistance.

The new TEKNA spray guns are fully coated both on the inside and outside with QuickClean Technology. The spray gun's fully protected interior provides corrosion resistance and easy cleaning to the internal passages of the gun which results in reduced paint defects. Corrosion resistance is especially important when using waterborne coatings. Not only are the new TEKNA QuickClean spray guns highly recommended for waterborne, but are also designed for solvent-based coatings as well.

The TEKNA QuickClean spray guns are equipped with the 7E7 high efficiency air cap, an additional fluid tip and needle set, a digital gauge and more. The spray guns are EPA approved and can be used in most HVLP areas.
