

# ATTENTION DeVILBISS AIR VIZOR™ USERS

Current OSHA regulation 1910.134 requires that breathing air supplied from an air compressor shall be monitored for the presence of carbon monoxide. An over-heated compressor may form carbon monoxide. An improperly located compressed air intake can also transfer carbon monoxide to the respirator user.

An electronic carbon monoxide monitor that constantly monitors your air system is the most convenient and effective method available. A variety of monitors are available from manufacturers that specialize in this technology.

DeVilbiss does not manufacture, warrant, or provide service for carbon monoxide monitors, but as a convenience to you, it is offering Air Vizor™ users the opportunity to purchase an electronic carbon monoxide monitor through ENMET Corporation for the special price of \$700.00 plus shipping and tax.

This AC powered unit is manufactured by ENMET Corporation and features both audible and visual alarms, digital display, and is covered by the manufacturer's one-year warranty. Set up and operation are simple. Installation takes less than one hour in most cases. Hardware and hose for integrating with Air Vizor™ filtration system are included.

To purchase a monitor and calibration kit, please return the bottom half of this form with a check, credit card information or money order in U.S. dollars along with DeVilbiss proof of purchase (invoice copy) to:
